IDC Report Showcases How Asia/Pacific Tech Providers Use AI to Ease ESG Compliance and Build a Sustainable Ecosystem

SINGAPORE, 22 January 2025 – A recent IDC report titled, [Leveraging AI to Overcome ESG Compliance Challenges](#), highlighted that over 25% of businesses in Asia/Pacific rank Environmental, Social and Governance (ESG) compliance requirements as their top challenge in the next 12 months. Being an export-reliant regional economy, the Asia/Pacific region is highly sensitive and influenced by regulations in western markets. Countries and businesses in the region must transition to more sustainable and ESG-compliant economies to ensure economic growth and maintain competitiveness. The small number of countries that have levied some form of carbon tax, such as Japan, Singapore, India, and Indonesia, are export-heavy economies that are more sensitive to shifts in global regulations and, as a result, are the early adopters.

“Economic vulnerabilities combined with the steadily increasing impact of climate change in the region will result in sustainability regulations in the Asia/Pacific region to lean towards being stricter in order to ensure economic growth and give businesses a competitive edge in the global economy,” says [Abhishek Kumar](#), Associate Research Director, IDC Asia/Pacific. He continues, “As a result, a number of innovative AI-powered solutions are being developed to help businesses tackle their growing ESG-related compliance requirements by Asia-based technology providers such as Impact Intelligence and Alibaba Cloud in China and ESGpedia and Unravel Carbon in Singapore,” ends Kumar.

These AI-driven solutions are becoming key tools in the sustainability ecosystem with financial institutions relying on them to aid in green and sustainable financing decisions. For example, one of the longest-established banks in Singapore, OCBC, uses ESGpedia’s

Incorporating sustainability into supply chain practices is not merely a regulatory requirement but a strategic advantage. By proactively managing environmental and human rights risks, companies can enhance resilience, protect their reputation, and achieve long-term success.

Asian financial regulators upping their game on climate disclosures, survey finds

April 11, 2025 | Written by [Moriah Costa](#)

Awareness of the International Sustainability Standards Board (ISSB) climate disclosure guidelines has increased among Asian financial regulators, with nearly 70% of those surveyed planning to introduce mandatory disclosures, a study from the Asian Development Bank Institute found.

Several regulators are also planning to require disclosures of greenhouse gas emissions, with 42% planning to require and 8% planning to recommend scope 3 emissions, which include the whole supply chain including suppliers, as well as scope 1 and 2, covering direct and indirect operational emissions. Around 25% are planning to mandate or recommend just scope 1 and 2, while the remaining 25% undecided.

The [survey of 12 financial regulators](#) in Asia shows that the region's understanding of the ISSB and the importance of mandatory climate disclosure has increased drastically from when the first survey was conducted a year ago, said report author Sayuri Shirai, a professor at Keio University and former board member of the Bank of Japan.

ESG systems and financial performance in industries with significant environmental impact: a comprehensive analysis

Qingwen Li* | Waifan Tang | Zhaobin Li

Department of Construction and Quality Management, School of Science and Technology, Hong Kong Metropolitan University, Kowloon, Homantin, Hong Kong SAR, China

Research background and significance: As China's economy continues its rapid expansion, the issue of environmental degradation has escalated, particularly within industries with significant environmental impact, such as steel, chemical, pharmaceutical sectors. These sectors are confronted with profound environmental and social responsibility challenges. The development of robust Environmental, Social, and Governance (ESG) systems has therefore become essential for improving environmental performance, meeting social responsibilities, and optimizing corporate governance structures. This study investigates the impact of ESG system implementation on the financial performance of enterprises within these environmentally impactful industries, offering a scientific foundation and practical guidance for corporate leaders and policymakers to facilitate green transformation and sustainable development.

Why ESG is a Business Imperative?

Employee Engagement and Retention

- ✔ Attracting Talent: Millennials and Gen Z prefer working for purpose-driven organizations
- ✔ Employee Morale: Sustainability initiatives foster engagement and loyalty among employees
- ✔ Productivity: Employees are often more motivated in organizations committed to positive societal impact

Why ESG is a Business Imperative?

Competitive Advantage

- 🌱 Innovation: ESG goals encourage innovation in products, processes, and services
- 🌱 First-Mover Advantage: Early adoption of sustainability practices positions companies as industry leaders

Why ESG is a Business Imperative?

Risk Management

- 🌱 Climate Risks: Mitigating environmental risks protects against disruptions from climate change
- 🌱 Supply Chain Resilience: Sustainable supply chains reduce vulnerabilities to resource shortages or unethical practices
- 🌱 Reputation Risks: ESG compliance minimizes risks tied to negative publicity
- 🌱 Physical risk & Transition Risk

Why ESG is a Business Imperative?

Contribution to Global Goals

- UN SDGs: Aligning with the United Nations' Sustainable Development Goals (SDGs) enhances global impact and collaboration
- Corporate Social Responsibility: Demonstrates a commitment to being part of the solution to global challenges
- A Better Future Together

- 01 ESG Advisory, Materiality Assessment & Transformation
- 02 ESG Supply Chain Questionnaires Management
